

# PA-2006BYI | Bring Your Ideas You design It | Instructions Manual

At Pilot USA Inc. and as a manufacturer, we have the capability to build headsets for special applications. Whether it be our simplest ear hangar style that hangs on your ear and lets you monitor a 2-way radio, an ANR headset bought off the shelf like our PA-1779 which was used on the Russian Mir Space Station or a full blown panel powered ANR headset jointly designed by NASA that is used on the International Space Station. We have the capability to build just about anything that you can imagine.

We think you probably know your business and requirements probably better than we do. So why shouldn't you be involved in the designing of a headset for your particular industry. We can build what you fits your industry best. Of course the more we can build for you the more affordable we can make it for you, but once we crack that 24 unit barrier, then you go right on the product line at our facility in Costa Mesa, California or our factory in South Korea.

You can choose from several different styles of carriers. You specify whether you want a sheepskin fleece head pad, or a soft pillow top head cushion. Gel ear seals or foam ear cushions. Noise canceling microphone or throat microphone. The choices are complex, and who could make a better choice for your particular environment.

## Here's where you get started.

Just check off features you think you need on your headset. If it's not there, then write it down on the bottom of this sheet and ask about it when you speak with us.

### Potential Carriers (ear cups):

- Single Suspension Style (PA-1779)
- Over the Head Style (PA-1171T)
- Behind-The-Head Style (PA-1140HNE)
- Single Sided Style (PA-1110)
- Ear Hangar Style (PA-2000A)
